Is online backup right for your business?

(Answer these questions to determine your fit)

- Would you suffer financial hardship if you lost your data?
- Are you concerned with the security of your data?
- Are you currently spending too much time and money on manual backup solutions?
- Would you benefit from an automated backup solution?
- Would a professionally monitored off-site backup ease your fears of data loss?

If you've answered yes to any of these questions, you need online backup. You can never have too many copies of your critical data; securely storing a copy offsite is imperative. Answering these questions honestly will help determine your risk. We can help determine the best course of action to affordably mitigate those risks.

Your data is one of your most important business assets. Contact us today to start protecting it!

Data Driven Remote Backup
Business Edition

As a business owner, you need to take control of the data generated by you and your employees. It's your data, after all, and you are responsible for protecting it from accidental or intentional destruction. Data loss will have a signifigant financial impact on your business. Imagine the consequences of your office manager accidentally deleting your orders list or a sales representative leaving the company and destroying the customer database before he goes. Trust your critical business data with a business class backup solution.

What separates a consumer class from a business class backup solution is the service and support that accompany the software. All backup solutions require maintenance, support, and monitoring to ensure that backups are occurring regularily and are up to date. Data Driven Remote Backup is a solution that couples a world-class, feature rich remote backup product with unparalleled service and support. In short, Data Driven Remote Backup is the best data insurance policy you can buy.

Our commitment to hands-on service and support are highlighted by two popular features:

Backup Performance and Integrity Monitoring: The backup performance and integrity monitoring feature of Data Driven Remote Backup generates a comprehensive integrity report that highlights any files that were recently generated or modified, but not backed up. This report is regularly reviewed by trained technicians so that corrections to your backup schedule can be made if needed.

Secure Data Transfer and Storage: Your data is backed up to highly secure SAS-70 Type II compliant data centers. All data transmitted to and from your computer is delivered over a secure connection. Furthermore, all of your data is encrypted prior to transmission and never again decrypted until restored on your computer. Both the encryption and decryption process take place with digital keys unique to your backup account.

Product Features

- Performance and integrity monitoring
- Secure data transfer and storage
- Scheduled automatic backups
- Comprehensive email reporting
- No expiration on the retention of your data
- Easy on-demand restoration
- Multiple revisions of your files
- HIPAA/SOX compliant
- Free data recovery guarantee
